

**TSE Registry – Stroke Inclusion Criteria  
Effective August 2021**

<b>STROKE diagnosis code descriptions reported (State requirement)</b>		<b>ICD-10</b>
Nontraumatic subarachnoid hemorrhage (SAH)		I60.00 - I60.9
Nontraumatic intracerebral hemorrhage		I61.0 - I61.9
Nontraumatic intracranial hemorrhage, unspecified		I62.9
Cerebral infarction		I63.00 - I63.9
<b>And meets one of the following:</b>		
	Was admitted to your facility	
	Died	
	Were transferred out by ground or air ambulance	
	Were transferred in by ground or air ambulance and admitted to a receiving facility	

**\*\*\*As of 8/27/2021, admissions with the following ICD-10-CM codes are no longer reportable:**

**Nontraumatic subdural hemorrhage\*\*\* I62.00 - I62.03**

**Nontraumatic extradural hemorrhage\*\*\* I62.1**

**However, we recommend that you leave them in data queries for the purposes of casefinding.** Review any cases that are coded as I62.XX or I62.1 to make sure these are not actually reportable strokes that have been miscoded.

<b>Non-STROKE diagnosis code descriptions reported by some facilities (Optional)</b>	<b>ICD-10</b>
Transient cerebral ischemic attack, unspecified (TIA)	G45.9
Patients who are admitted for other clinical conditions and subsequently develop a stroke during their hospitalization are not reportable to the TSE Registry. You may, however, enter and track these patients in ImageTrend if your facility wishes to do so.	In-house strokes, any ICD-10-CM
